## GOURMET VEGETABLES TUMBLER TOMATO (*Solanum lycopersicum* 'Tumbler')

**DESCRIPTION**  
Annual vegetable. Excellent for pots or hanging baskets. It can grow up to 1.2-1.8m/4-6 ft in height. If planted in a hanging basket, ensure it is well off the ground (2m/7ft) On average, the fruit produced is usually quite small, 60g/2oz in weight. When grown in the right conditions this variety can produce a large yield of very sweet and juicy, firm fleshed fruit.

**CULTIVATION**  
They do best in hot climates, with extra water in spring while the plant is growing and drier sunny conditions while the fruits are ripening. Grow in rich, moist soil climates. Plants may be grown in a green house but usually the flavor is better when grown outside, provided that they ripen properly on the vine before harvesting. The advantages of green house cultivation are earlier and heavier crops, a longer period of fruit production in autumn/fall and a wider choice of suitable varieties.

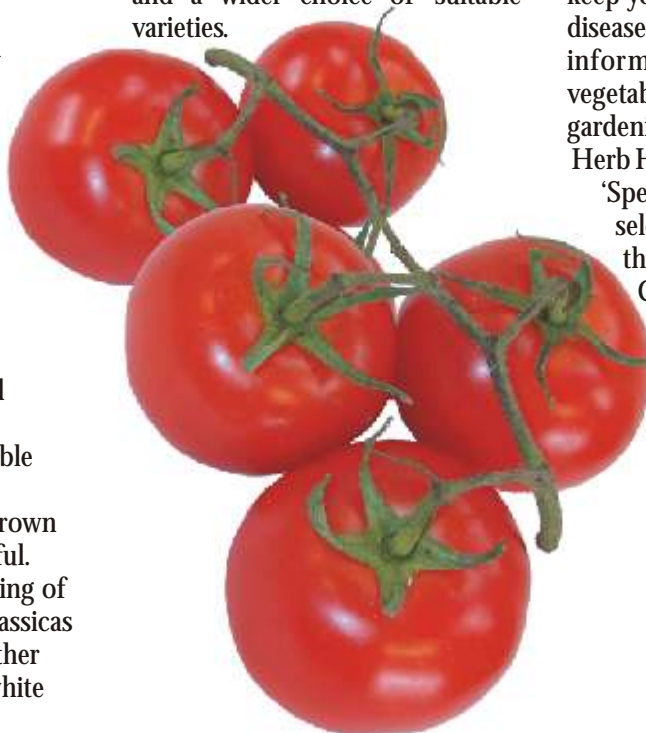

**USES**  
Used in many dishes to add color and flavor. Great for use in salads, as snacks or eating straight off the vine.

**GROWTH**  
Leaves should be picked as often as possible to promote new growth. Tomatoes and asparagus grown together are mutually helpful. Tomatoes aid early harvesting of cabbage. Tomatoes and Brassicas of all varieties grown together will help to ward off the white cabbage butterfly.

Soils that are suitable for tomatoes need to be fertile, well drained and moisture retentive. A good quality potting mix will provide this for this variety if the soil in your garden is not suitable. Ground grown Tumbler tomatoes require a feed of potash when young and a balanced feed with more nitrogen later on. It is found that more potash is needed in the dull 'wet season.' Tomatoes can suffer from a few problems, such as Wilt, Virus, molds and Red Spider to name a few. However on the upside if you keep your plant in good health the diseases risk is lessened. For more information on keeping your vegetables healthy see our organic gardening fact sheet on the Herb Herbert website. Select 'Special Interest' tab and select 'Organic Gardening' in the pull down menu.

Companion plant to Parsley. Grow in the same soil each year with the old stems and leaves dug into the soil for compost.
